

VALLEY OAK CUSTOMS

Design Manager

Quick Start Guide

Version 1.4.0

Find it. Organize it. Open it. Make it.

Copyright © 2026 Valley Oak Customs

1 What Design Manager is

Design Manager is a Windows organizer and visual browser for CNC files. It catalogs files where they already live and stores organization separately.

- Browse SVG and DXF designs plus related SheetCam JOB, image, TAP, and NC files.
- Search, preview, favorite, tag, collect, and record shop notes.
- Normal organization and migration do not move or change CNC source files. A file changes only when you explicitly confirm a supported file operation.

File safety: Design Manager never executes TAP or NC machine programs.

2 Upgrade install and activate

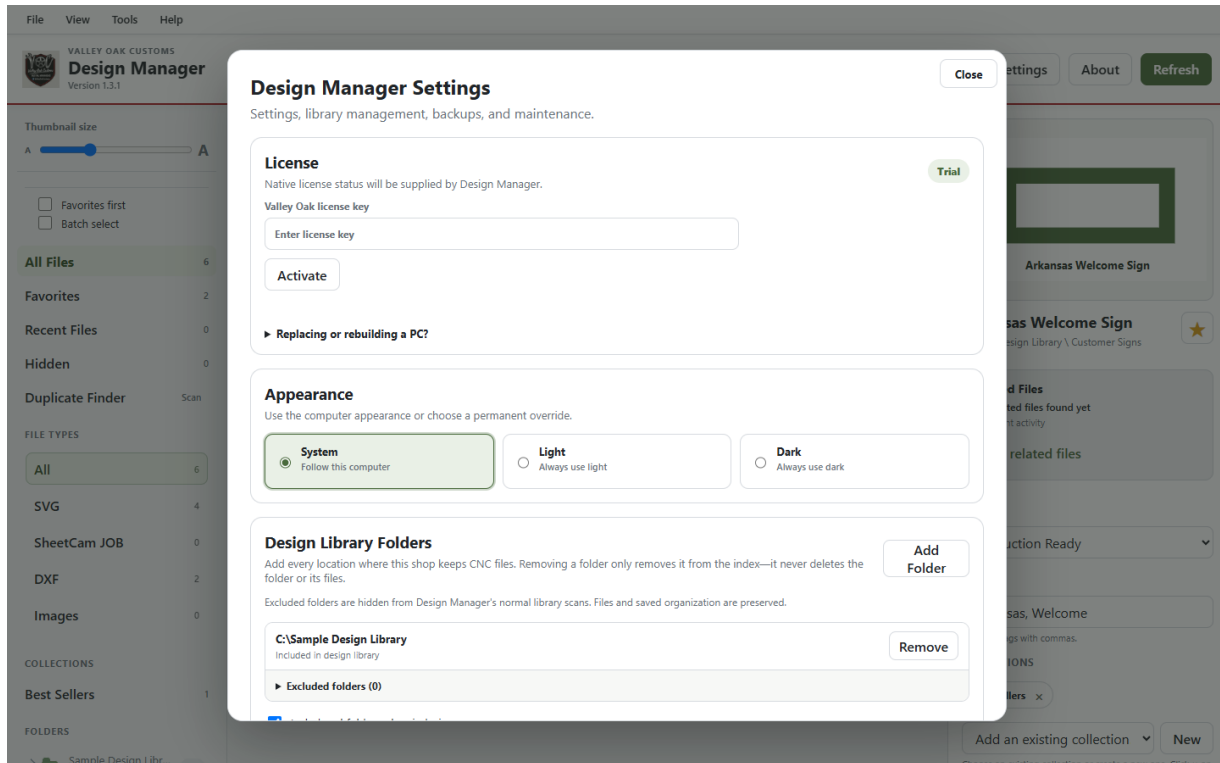

Run the trusted installer, accept the license agreement, and use Settings > License to activate this PC.

- An existing Local Workspace remains Local after upgrading to v1.4.0. Shared migration begins only when you choose it.
- A new installation begins with a trial. Viewer Mode preserves safe access when activation is unavailable.

3 Set Design Library Folders

Open Settings > Design Library Folders, add each top folder containing designs, choose whether to include subfolders, then Refresh.

- Folders remain in their original Windows locations. Removing one from the catalog does not delete it.
- In Local mode, folder exclusions omit selected subfolders from normal scans while preserving files and saved organization.

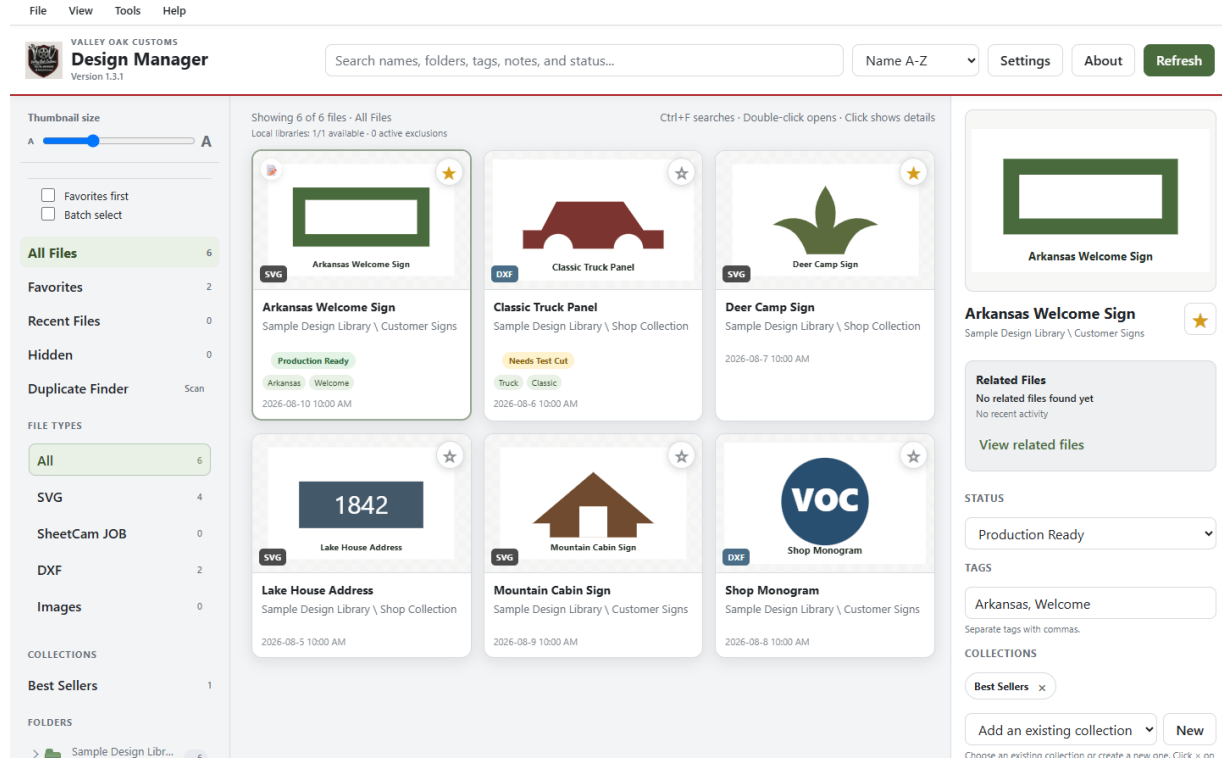

Design Library Folders in Settings.

4 Understand the main screen

Filters are on the left, design cards are in the center, and details and Related Files are on the right.

- Search filenames, folders, tags, notes, and status.
- Select once for details; double-click to open.

The main library and Details panel.

5 Find and organize a design

Select a file, then add a favorite, status, tags, collection, or notes. Wait for Saved automatically before closing.

- Use practical tags such as product type, theme, customer, season, or production readiness.

6 Use Related Files and Workflow

Automatic discovery suggests likely Design → SheetCam JOB → G-code connections. Needs Review requires your decision before a suggestion becomes active.

- Confirm good matches. Use Not related when files do not belong together.
- Saved Relationships lets you remove, reconsider, restore, or correct earlier choices.
- View related files shows active connections for the selected file.

Related Files — Needs Review

7 Link and preview related files

Choose Related File keeps the current file fixed while you select the other side.

- Use All Workflow Files for JOB, TAP, and NC files outside the normal design browser. Mixed-sheet JOBs can link to several Designs.
- TAP and NC previews are visual inspection only. Design Manager never runs machine code; verify programs in your normal CAM and machine workflow.

Choose Related File supports search and sorting.

8 Use Local or Shared Workspace

Local organization stays on one PC. Shared Workspace gives registered shop PCs common metadata and Workflow relationships.

- The Administrator manages authoritative roots, upgrades, backups, device roles, and Shared settings. Members perform ordinary Shared work.
- A Shared Workspace can define multiple ordered library roots. Map each root on every PC to the path that reaches the same files.
- A designated Recovery Device can restore Administrator control if the Administrator PC is lost.

9 Open designs in LightBurn

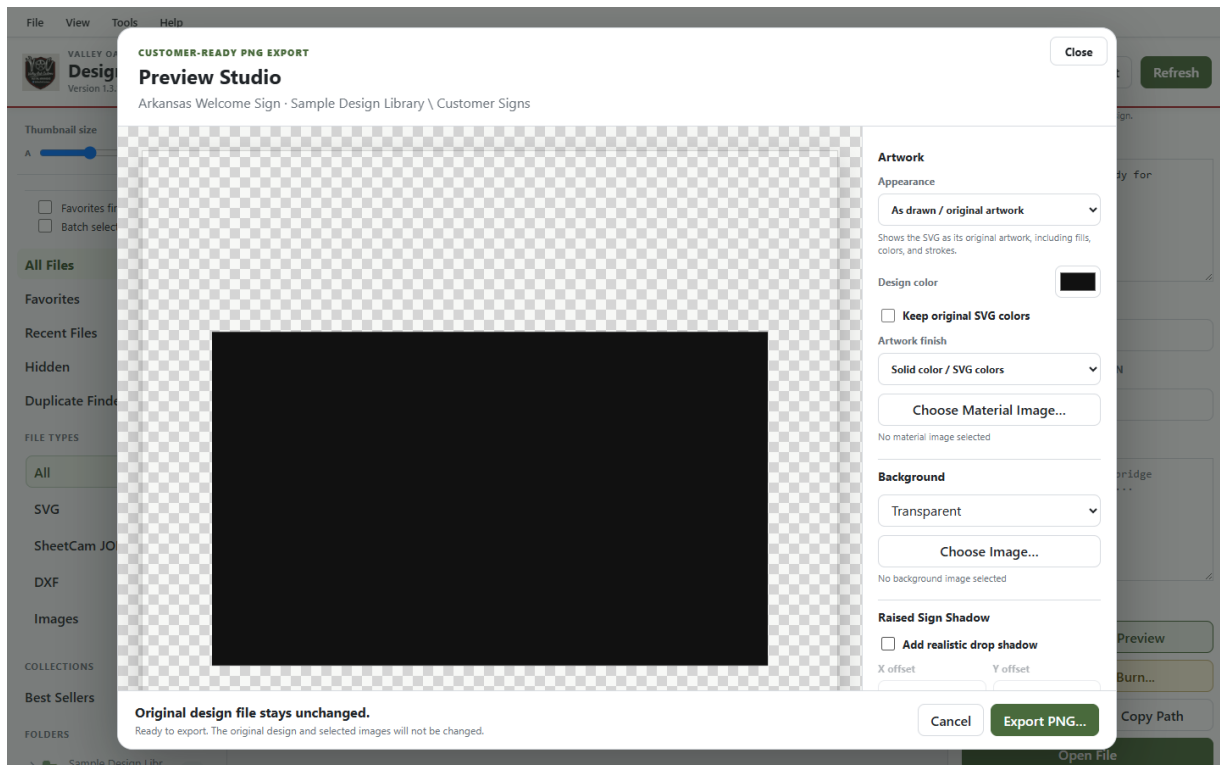

Configure and test LightBurn in Settings, then use Open in LightBurn for supported SVG and DXF designs.

- Design Manager passes the selected path to LightBurn without changing the source file. JOB, TAP, and NC files do not use this action.

10 Create a customer proof

Select an SVG or DXF, choose Create Customer Preview, then export a separate PNG.

- The original SVG or DXF remains unchanged.

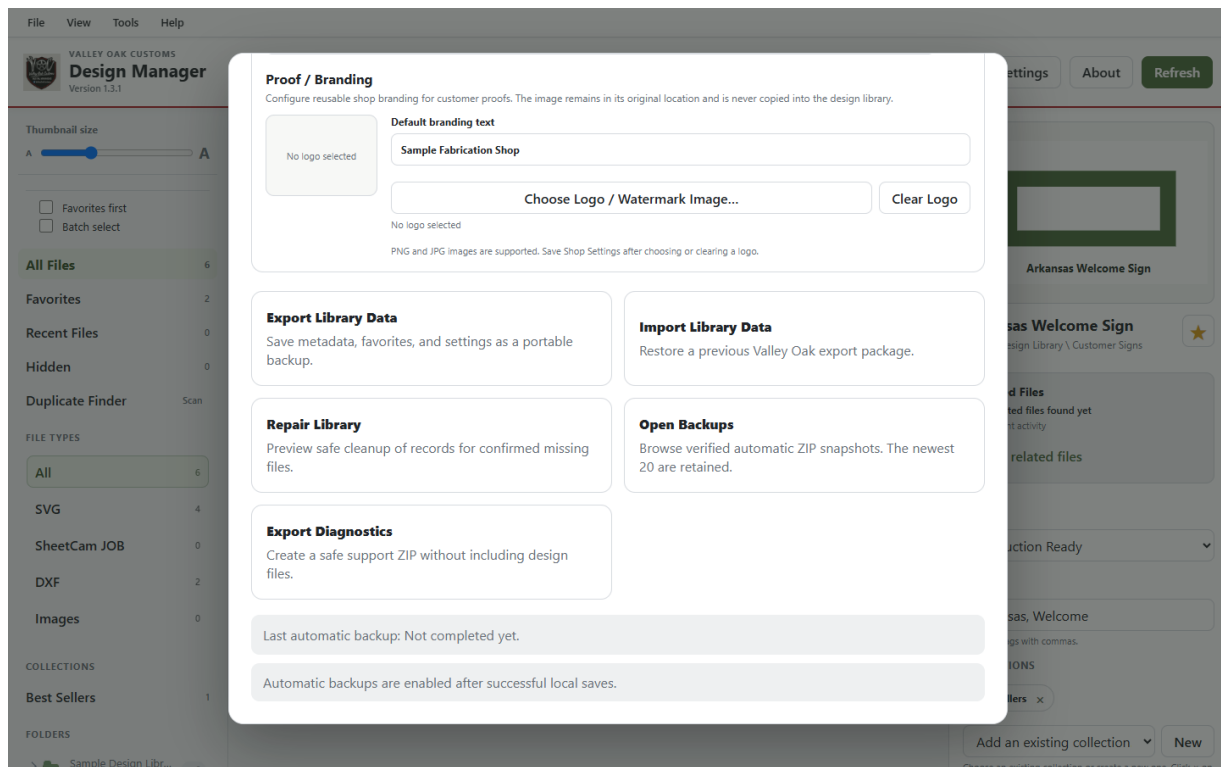

Preview Studio creates a separate PNG proof.

11 Backups recovery and updates

Open Settings for maintenance and recovery tools.

- Local Back Up / Export protects settings and organization. Shared mode provides Back Up Shared Workspace and isolated restore tools. CNC source folders still need their own backup.
- Repair previews stale references. Export Diagnostics gathers support details without design files.
- Choose Settings > Check for Updates manually. The update endpoint is contacted only when you request the check.

Backup and maintenance controls.

12 Quick troubleshooting

Start with Refresh, clear Search and filters, then verify the drive or network share in Windows.

- Shared offline: restore access, then Refresh. Edits remain read-only while the workspace is unavailable.
- Missing relationship: inspect Needs Review, All Workflow Files, and Saved Relationships.
- Keep separate backups of CNC folders; Design Manager backups contain metadata, not source files.
